

LEVEL 40 — WELLNESS INTEGRATED CAFÉ

Development Report

Wednesday, 20 August 2026 — both working sessions of the day · level40-cafe (Next.js 16 / Neon Postgres / Vercel)

Summary. Today's work covered seven areas: site-wide content brought fully in line with the wellness brand, a redesigned homepage and Meal Plans experience, admin-managed Team profiles, a complete Journal (blog) system with admin management, nutrition pills and a price rectification on the café menu, header and footer improvements, and supporting admin-panel and deployment changes.

01 Content Changes — brand alignment & homepage storytelling

HOMEPAGE

CONTENT

SEO

- **Homepage hero** rebuilt: uniform pill sizes, larger legible labels that wrap cleanly, and brand-correct imagery per pill (healthy dining, holistic yoga, the branded meal-plan box, community, retail).
- New **"About Level 40"** narrative — *"Your wellness journey starts here"* — with an image carousel of the six brand concepts; **"Our Ecosystem"** rewritten and restyled with proper spacing and darker, readable text.
- Café picks row limited to four photographed dishes in one line; **"Why Level 40"** panels presented as a stacked poster pager (one poster at a time, next peeking behind, click to advance); a continuously drifting brand-story image rail added near the foot of the page; Instagram handle added.
- **Site metadata** (what Google and social shares display) now reads "Level 40 — Wellness Integrated Café in Dubai" with a matching description.
- **About page** fully rewritten — "More than a café." hero, the wellness-comes-together story, location corrected to Continents Tower JVC, new pillars (Science-backed nutrition · Made fresh, made honest · Balance over extremes), and fabricated stats replaced with true brand facts (100% vegetarian, one integrated destination).
- **Services page:** six cards now mirror the real ecosystem — Healthy Dining, Specialty Coffee, Pickup & Delivery, Nutritionist-Guided Meal Plans, Holistic Yoga, NEAT by Nicky Retail — replacing the old private-events / gifting-hampers copy. A meat-dish caption in the gallery was corrected for the 100% vegetarian brand.

02 Team Management

DATABASE

ADMIN PANEL

HOMEPAGE

- New `team_members` table and an admin **Team** section: add/edit members with name, styled designation dropdown (Founder, Our Chef, Nutritionist, Yoga Teacher, Our Barista), short bio, photo upload, display order and Live/Hidden visibility.
- The homepage "**Meet the team**" section now renders the admin-managed members with circular portraits — content is fully controlled from the admin panel.
- A server-rendering error (500) surfaced during this work was diagnosed and fixed.

03 Blogs Management — the Journal

DATABASE

ADMIN PANEL

PUBLIC SITE

SEO

- New `blog_posts` table: title, unique slug, short description, full article, up to 4 images (first is the cover), hashtags, author, publish date, Live/Hidden flag.
- New **Blog** section in the admin sidebar (`/admin/blog`): stat cards, a post table with cover thumbnails, and an add/edit dialog with image uploads, auto-slug from the title and flexible hashtag input. Saving refreshes the public pages instantly.
- **Homepage**: "From our journal — Wellness stories & notes" section showing the two newest live posts as gold-accented cards, with "Read all stories".
- `/blog` lists every live post in a three-up grid; `/blog/[slug]` renders the full article with the post's cover as its banner, drop-cap body, hashtags, image gallery, date and author — all styled in the site's page-hero cream-and-gold language, consistent with the Meal Plans page.
- **Journal** added to the main navigation; Blog/BlogPosting structured data (JSON-LD) and OpenGraph metadata included; 3 opening posts seeded (two shown on the homepage, all on `/blog`).

04 Café Menu — nutrition pills & meal-rate rectification

DATABASE

MENU PAGE

ADMIN PANEL

- **Ingredients removed** from menu cards entirely; a new free-form `nutrition` field stores comma-separated facts (calories, protein, carbs, fat, fibre...), each rendered as a rounded gold **pill** on the card.
- Admin Café Menu editor gained a "Nutrition" input (hidden for retail products); the menu CSV import/export carries a Nutrition column instead of Ingredients.
- Two items filled as live examples of the pill structure — **Acai Bowl** and **Berry Antioxidant Boost** (placeholder values, editable from the admin panel).
- **Meal-rate rectification**: all **94 café-menu items** repriced by database script to random whole-AED values between **45 and 60**; verified across the full range. Retail products untouched, and individual prices remain editable in the admin panel.

05 Meal Plans Changes

SUBSCRIPTION PAGE

HOMEPAGE

DESIGN

- Meal Plans page overhauled: meal-plan-box banner image, and the customer journey (Assess → Nutritionist Consultation → Personalised Meal Plan → Yoga Consultation → Guided Fitness Plan → Progress) redesigned from a flat list into a stylish snaking flow with numbered diamond badges and connecting arrows, following the supplied reference pattern in brand colors.
- Condition-specific programmes surfaced (Diabetes, Weight Management, PCOS, Cholesterol, Longevity); description text darkened for readability; the design made fully responsive.
- New homepage **"Explore Meal Plans"** section: heading, short description with the consult-our-consultant line, the two flagship plans side by side, and navigation to the full Meal Plans page.

06 Header & Footer Changes

- HEADER
- FOOTER
- CONTACT

- **Header:** logo enlarged (48px → 64px) and side gutters slimmed — the logo sits further left and the menu / sign-in / cart further right, header only; page content keeps its centered width. Mobile keeps a fitted smaller logo. **Journal** added to the nav.
- **Footer:** brand blurb rewritten to the wellness positioning, ending *"Eat well. Move well. Live well."*; Hours column shows "Pickup & delivery · **+971 56 454 8896**" as a tap-to-call link; Visit column gained a **"Get directions ↗"** link that opens Google Maps navigation, sharing the exact same map target as the Contact page so the two can never drift.
- **Floating WhatsApp button** on the homepage (bottom-right): opens a chat with **+971 50 795 0331** with an enquiry greeting prefilled — works with the mobile app and WhatsApp Web.
- **Sign-in page:** eye icon inside the password field to show/hide the password (sign-in and sign-up).

07 Admin Panel & Deployment

- ADMIN PANEL
- DATABASE
- VERCEL

CHANGE	DETAIL
New admin sections	Team and Blog added to the sidebar, each with stat cards, management tables and add/edit dialogs consistent with the existing console design.
Café Menu editor	New Nutrition field; menu CSV import/export template updated (Nutrition column replaces Ingredients).
Database migrations	0007 (blog_posts) · 0008 (drop ingredients) · 0009 (add nutrition) — schema-only, applied and ready for the next deploy.
Seed-safety guard	Vercel build confirmed to only migrate + build (never seed); additionally the seed script now refuses to run in any Vercel environment unless deliberately overridden — production data cannot be touched by a deploy.

Prepared 20 August 2026 · Level 40 Café application · Covers both working sessions of 20 August 2026 only. All changes verified on the local development server (typecheck, lint and page-render checks passed); work is uncommitted in git pending review.
