

Level 40 Cafe & Wellness — Website Development Report

Summary

What was built	A brand-new, fully custom website for Level 40 Cafe & Wellness — including the cafe menu, an online retail shop, meal plans, customer accounts, online ordering with cart and checkout, and a complete private admin panel for you to manage everything yourself.
Built from scratch	This is not a template or a website builder. Every page, every feature and the entire system behind it was designed and coded specifically for your business.
Old website data moved over	All the products from your old WordPress shop (neatbynicky.com) were exported, cleaned up, and moved into the new website — including product photos, prices, sizes, colours and categories.
Live on the internet	The website is deployed on Vercel (professional cloud hosting used by major companies) with a secure cloud database, and updates automatically whenever new changes are published.
Security built in	Secure login (including 'Sign in with Google'), password reset by email code, protection against spam and abuse, and all prices double-checked on the server so nobody can tamper with an order.
You are in control	The admin panel lets you add/edit products, update the cafe menu, manage meal plans, view orders and customers, upload photos, and bulk-update your whole shop catalogue using a simple spreadsheet — no developer needed for day-to-day changes.

Key Numbers

Major deliveries	28 separate deliveries published to the website
Products migrated from old site	35 unique products (cleaned up from ~60 messy rows in the old shop's export)
Website sections built	Home, Menu, Shop, Product pages, Cart, Checkout, Meal Plans, Subscription info, Account & Orders, Sign in / Sign up, Contact, Privacy, Terms
Admin panel sections built	Dashboard, Orders, Products (with bulk import/export), Menu, Meal Plans, Customers, Photo uploads
Emails set up	Welcome email for new customers + password-reset code email, both in your branding

All Work Done — Day-by-Day Log

#	Date	Area	What Was Done (in plain words)
STAGE 1 — SETTING UP THE FOUNDATION (21 July 2026)			
1	2026-07-21	Foundation	Set up the brand-new website project using the latest, most modern web technology (the same framework used by companies like Nike and Netflix).
2	2026-07-21	Foundation	Locked every software component to a specific tested version, so the website stays stable and future updates never break it unexpectedly.
3	2026-07-21	Foundation	Set up a professional cloud database to safely store all your products, menu items, orders and customer information.
4	2026-07-21	Foundation	Added a safety system that checks all the website's settings are correct before it starts — so a wrong setting can never silently break the live site.
5	2026-07-21	Foundation	Installed a professional design component library so every button, form and menu looks consistent across the whole site.
6	2026-07-21	Foundation	Collected and organised all your brand images, logos and photos into the new project.
STAGE 2 — DATABASE, ACCOUNTS & SECURITY (21 July 2026)			
7	2026-07-21	Database	Designed the complete database structure for the whole business: products, categories, cafe menu, orders, meal plans, subscriptions, invoices and customer accounts.
8	2026-07-21	Database	Set the system up so any future database changes are applied automatically and safely every time the website is updated — no manual work, no risk of the site and database going out of sync.
9	2026-07-21	Accounts	Built the customer account system: customers can register with email and password.
10	2026-07-21	Accounts	Added 'Sign in with Google' so customers can log in with one click using their Google account.
11	2026-07-21	Security	Protected every private page and every admin function so only the right person can access it — customers can only see their own data, and admin screens are locked to admins only.
12	2026-07-21	Content	Loaded the full cafe menu and meal plans into the database, and created the first admin account so the site was usable from day one.
STAGE 3 — BUILDING THE PUBLIC WEBSITE (21 July 2026)			
13	2026-07-21	Design	Carried over your exact brand look — colours, fonts and styling — so the new site looks and feels like your brand, not a generic template.
14	2026-07-21	Design	Built the site-wide header and footer with navigation that works on both desktop and mobile.

#	Date	Area	What Was Done (in plain words)
15	2026-07-21	Pages	Built the home page (landing page) showcasing the cafe and wellness brand.
16	2026-07-21	Pages	Built the cafe Menu page, pulling live data from the database — when you edit the menu in admin, the website updates automatically.
17	2026-07-21	Pages	Built the online Shop page showing all retail products in a browsable grid.
18	2026-07-21	Pages	Built individual product pages with photos, description, price and options.
19	2026-07-21	Pages	Built the shopping cart — customers can add items, change quantities and see their total before checking out.
20	2026-07-21	Pages	Built the Meal Plans page presenting all your plans with prices and details.
21	2026-07-21	Pages	Carried over all the marketing/information pages from your old website.
22	2026-07-21	Pages	Created the Privacy Policy and Terms & Conditions pages.
23	2026-07-21	Pages	Built the Sign In / Sign Up page for customers.
STAGE 4 — GOOGLE VISIBILITY / SEO (21 July 2026)			
24	2026-07-21	Google/SEO	Created the sitemap — the file Google reads to find and list every page of your website in search results.
25	2026-07-21	Google/SEO	Added search-engine instructions (robots file) so Google indexes the right pages and skips private ones.
26	2026-07-21	Google/SEO	Added special hidden 'structured data' that helps Google show your business details nicely in search results.
27	2026-07-21	Google/SEO	Added a special file that helps AI assistants (like ChatGPT) correctly describe your business when people ask about it.
STAGE 5 — ONLINE ORDERING & CHECKOUT (21 July 2026)			
28	2026-07-21	Ordering	Built the full checkout: customers place real orders that are saved in the system with a clear status (pending, paid, etc.).
29	2026-07-21	Ordering	All prices, VAT and totals are calculated on the server from the official price list — a customer can never manipulate a price from their browser.
30	2026-07-21	Ordering	Each order permanently records the product name and price at the time of purchase — so if you change a price later, old orders stay correct.

#	Date	Area	What Was Done (in plain words)
31	2026-07-21	Ordering	Built the payment system framework with a test payment mode, designed so a real payment provider (like Stripe) can be switched on at launch without rebuilding anything.
32	2026-07-21	Ordering	Added safeguards so a payment confirmation can never be faked and the same payment can never be counted twice.
33	2026-07-21	Ordering	Built the customer 'My Orders' page where customers can see their order history.
STAGE 6 — YOUR ADMIN PANEL (22 July 2026)			
34	2026-07-22	Admin Panel	Built a private, password-protected admin area — your control room for the whole website.
35	2026-07-22	Admin Panel	Admin Dashboard: an at-a-glance overview of the business.
36	2026-07-22	Admin Panel	Orders screen: view and manage every customer order and update its status.
37	2026-07-22	Admin Panel	Products screen: add, edit and remove shop products yourself.
38	2026-07-22	Admin Panel	Menu screen: update the cafe menu (items, prices, sections) yourself.
39	2026-07-22	Admin Panel	Meal Plans screen: edit plans and see how many subscribers each plan has.
40	2026-07-22	Admin Panel	Photo uploads: upload product and site photos straight from the admin panel to professional cloud image storage.
STAGE 7 — CUSTOMER EMAILS & PROTECTION (22 July 2026)			
41	2026-07-22	Emails	Set up the professional email service (Resend) for sending automatic emails to customers.
42	2026-07-22	Emails	New customers automatically receive a branded welcome email when they sign up.
43	2026-07-22	Emails	Built 'Forgot password': customers receive a 6-digit code by email to safely reset their password.
44	2026-07-22	Emails	Designed a reusable branded email template so every email the site sends matches your brand.
45	2026-07-22	Security	Added rate limiting — automatic protection that blocks anyone trying to spam the site with repeated requests (e.g. flooding the password-reset email system).
46	2026-07-22	Polish	Added your logo as the browser tab icon (favicon) and app icons for phones.

#	Date	Area	What Was Done (in plain words)
47	2026-07-22	Polish	Fixed styling issues on the product page for a cleaner look.
48	2026-07-22	Handover	Wrote a full project status document recording everything completed, what remains, and exactly what is needed from your side (so nothing gets lost or forgotten).
49	2026-07-22	Research	Researched UAE VAT invoice rules (simplified tax invoice requirements) so the invoice feature will be legally compliant — pending your TRN and your accountant's confirmation.
STAGE 8 — MOVING YOUR OLD SHOP DATA OVER (25 July 2026)			
50	2026-07-25	Data Migration	Exported the complete product catalogue from your old WordPress shop (neatbynicky.com).
51	2026-07-25	Data Migration	Cleaned up the messy export: around 60 rows with many duplicates (one product appeared 12 times!) were carefully merged down to 35 correct, unique products.
52	2026-07-25	Data Migration	Imported all 35 products into the new website with names, descriptions, prices, photos, sizes, colours and categories.
53	2026-07-25	Data Migration	Built the import as a repeatable one-click process — it can be safely re-run any time without touching the cafe menu.
54	2026-07-25	Data Migration	Rebuilt your product category structure (with sub-categories, e.g. Mats > Jute Mats) to match how your old shop was organised.
55	2026-07-25	Shop Features	Added Size and Colour options to products — customers pick their size and colour (with colour swatches) before adding to cart.
56	2026-07-25	Shop Features	The chosen size and colour follow the item all the way through the cart, checkout and into the order record.
57	2026-07-25	Bulk Editing	Built a bulk import/export system in the admin panel: download your whole catalogue as a spreadsheet, edit it in Excel, and upload it back — hundreds of products updated in one go.
58	2026-07-25	Bulk Editing	Added a ready-made spreadsheet template so you always know exactly what format to fill in.
59	2026-07-25	Bulk Editing	The import is smart: it recognises existing products (by their product code) and updates them instead of creating duplicates, and automatically creates any new categories it finds.
60	2026-07-25	Shop Design	Fixed the shop cards so prices and buttons line up neatly no matter how long a product name is.
61	2026-07-25	Shop Design	Fixed the mobile home-page photo slider so it shows one clean photo per swipe instead of cut-off images.

#	Date	Area	What Was Done (in plain words)
62	2026-07-25	Shop Design	Built a photo gallery on product pages — customers see all photos of a product and click thumbnails to view each one large.
63	2026-07-25	Photos	Moved all product photos off the old WordPress server onto your own professional cloud storage — so your new site no longer depends on the old website staying online.
64	2026-07-25	Pages	Improved and reworked the Menus page.
STAGE 9 — CUSTOMERS SCREEN & HOMEPAGE REFRESH (27–29 July 2026)			
65	2026-07-27	Admin Panel	Built a new Customers screen in the admin panel so you can see and manage your customer list.
66	2026-07-27	Data	Added the customer records into the system database.
67	2026-07-27	Design	Made a large round of visual and styling improvements across the site.
68	2026-07-29	Home Page	Redesigned and improved the home page content and layout.
69	2026-07-29	Home Page	Added your Instagram handle with a link in the website footer so visitors can find and follow your Instagram.

Website Features

#	Feature	What It Means For You / Your Customers
FOR YOUR CUSTOMERS		
1	Browse cafe menu online	Customers see your full, always-up-to-date menu on any device.
2	Online retail shop	Customers browse and buy your retail products (mats, apparel, accessories) online.
3	Product photo galleries	Multiple photos per product with clickable thumbnails.
4	Size & colour selection	Customers choose their exact size and colour before ordering, with visual colour swatches.
5	Shopping cart & checkout	Full add-to-cart and checkout experience with accurate totals and VAT.
6	Customer accounts	Register with email or sign in instantly with Google.
7	Order history	Customers can log in and see all their past orders.
8	Password reset by email code	Forgot password? A secure 6-digit code arrives by email.
9	Welcome emails	Every new customer gets a branded welcome email automatically.

#	Feature	What It Means For You / Your Customers
10	Meal plans showcase	All your meal plans presented with pricing and details.
11	Works on all devices	The entire site is designed for phones, tablets and computers.
12	Instagram link	Footer links visitors straight to your Instagram.
FOR YOU (ADMIN PANEL)		
13	Private admin login	Only authorised admins can access the control panel.
14	Dashboard	Business overview at a glance.
15	Manage orders	See every order and update its status as you prepare/deliver it.
16	Manage products	Add, edit or remove shop products yourself — no developer needed.
17	Bulk import/export	Update the entire catalogue via a spreadsheet: download, edit in Excel, upload back.
18	Ready-made template	A downloadable template shows exactly how to fill in product data.
19	Manage cafe menu	Edit menu items, prices and sections yourself.
20	Manage meal plans	Edit plans and see live subscriber counts.
21	View customers	See and manage your customer list.
22	Upload photos	Upload product/site photos directly to professional cloud storage.
BEHIND THE SCENES (INVISIBLE BUT IMPORTANT)		
23	Tamper-proof pricing	All prices and totals are verified on the server — nobody can trick the site into a wrong price.
24	Order records preserved	Old orders keep the original price/name even after you change products later.
25	Payment-ready	The payment system is fully built and tested in mock mode; the real payment provider plugs in at launch.
26	Spam/abuse protection	Automatic rate limiting blocks repeated abusive requests.
27	Google-friendly	Sitemap, search-engine rules and structured data are all in place for good Google visibility.
28	Automatic updates	Every published change updates the live site and database automatically and safely.
29	Independent from old site	All photos and data now live on your own infrastructure — the old WordPress site can be switched off.

Old Site Data Migration

#	Step	What Was Done
1	Export	Took a full export of the product catalogue from your old WordPress shop (neatbynicky.com).
2	Clean-up	The old export was messy — about 60 rows with many duplicates (for example, 'Cycling Short' appeared 12 separate times). Every row was reviewed and merged into 35 correct, unique products.
3	Import	All 35 products were loaded into the new website with names, descriptions, prices, sizes, colours, photos and categories.
4	Categories	Your product category structure — including sub-categories like 'Mats > Jute Mats' — was rebuilt to match how your old shop was organised.
5	Photos	Every product photo was moved from the old WordPress server onto your own professional cloud storage. Your new website no longer depends on the old site staying online — it can be safely shut down.
6	Repeatable	The whole import was built as a safe, repeatable process, and the master product list is saved with the project — so the catalogue can always be restored or re-imported.
7	Future updates	Going forward you don't need this process at all: the admin panel's spreadsheet import/export lets you update the whole catalogue yourself in Excel.
8	A note on file format	The bulk import/export uses CSV files (which open directly in Excel). The common web 'Excel .xlsx' software component was deliberately avoided because it has known unfixed security vulnerabilities — this choice keeps your admin panel safe.
